

THE SOCIAL AUTOPILOT

Free Prompt Pack – by Zubair Trabzada · AI Workshop

YOUR VOICE · ANY PLATFORM · POSTS ITSELF

This is the system from the video. One brand-voice file + one adaptive prompt, and Claude **interviews you** (three questions), researches what's working on your platform today, writes the post in **your** voice – and schedules it through your connected posting tool. You just approve.

Before you start (~10 minutes, once)

- **Claude Code** installed and logged in → claude.com/claude-code (claude.ai works too – just upload your brand-voice file to the chat)
- **Your brand-voice file** – grab the template that comes with this pack ([brand-voice-template.md](#)), fill it in, or let Prompt 1 build it for you
- **Optional – auto-posting:** a posting MCP like Blotato connected to Claude Code (blotato.com → API key → their MCP guide → connect your socials). No MCP? Claude gives you copy-paste posts instead. Ask Claude Code: *"list my connected MCP tools"*
- **Optional – AI visuals:** the Higgsfield MCP for images and Reels (higgsfield.ai)

Build Your Brand Voice File

I've attached my brand-voice template (brand-voice-template.md). Interview me to fill it in – ask ONE question at a time, and push back when my answers are vague or generic.

Cover: who I am in one sentence, exactly who my audience is and what they want, my offers and calls-to-action, my voice (funny↔serious, bold↔humble, casual↔polished), 5 phrases I actually say, what I'd NEVER post, 3 short TRUE stories from my work with real details and numbers, and my 3–5 forever topics.

Then save the completed file as brand-voice.md, keeping the per-platform style sections from the template. Write it so an AI reading ONLY this file could post as me – and my followers wouldn't notice the difference.

This file is the whole secret. Everyone else's AI posts sound like AI. Yours will sound like you – because it's built from your stories, your phrases, your rules.

One Prompt, Any Platform 🎯

Read my brand-voice.md. Then interview me – exactly 3 questions, ONE at a time. Wait for my answer before the next question:

1. Which platform am I posting to today – Instagram, X, LinkedIn, TikTok, Facebook, or YouTube?
2. What's the topic – something that happened to me, something I want to teach, an offer to push... or should you research what's trending in my niche right now and pitch me 5 angles?
3. What's the goal – grow followers, get DMs and leads, sell an offer, or start conversations?

Then, with no further questions: research online what's working on that platform for that kind of content THIS week (hooks, formats, length). Write me 3 post options that follow the platform rules in my brand-voice file, in MY voice – every option must include at least one specific story, number, or phrase from my file that nobody else could post. No AI-speak ("game-changer", "unlock", "delve", rhetorical-question openers). End each with ONE call-to-action from my file that matches my goal.

I'll pick one. If a visuals tool (like Higgsfield) is connected, generate a matching visual in my visual style – correct format for the platform (vertical 9:16 for Reels/TikTok, 4:5 for feed posts). If my posting tool (like Blotato) is connected, show me the final post + proposed time and schedule it ONLY after I say yes. Never post without my approval. If nothing is connected, give me the final post ready to copy-paste.

That's the whole system. Three answers from you → researched, on-brand, platform-native post → approved → published.

PROMPT 3 – WEEKLY (15 min)

The Full Week on Autopilot

Read my brand-voice.md. Ask me the same 3 questions, but for the WEEK: which platform(s), any topics or news from my week I should work in (or research trending angles), and my #1 goal this week.

Then: plan 5–7 posts across the week (mix formats the platform rewards – for Instagram: reels, carousels, singles; for X: posts + one thread; for LinkedIn: stories + one contrarian take). Show me the plan as a table and WAIT for my edits. After I approve: write every post per my brand-voice rules, generate the visuals if my visuals tool is connected, then show me the complete queue – day, time, platform, text, visual – and schedule it through my posting tool only after my explicit yes.

Next week, start by telling me which of last week's posts did best and apply what we learned.

Your new routine: answer 3 questions, approve a plan, approve a queue. ~15 minutes a week.

BONUS – REPURPOSE

Turn One Thing Into Everything

Read my brand-voice.md. Here is my latest [video transcript / blog post / podcast notes]: [PASTE IT]. Ask me which platforms to target (that's your only question), then turn it into platform-native posts for each – every piece standalone (never "in this video"), pulling the most surprising specific moments, my voice rules applied. Then queue them like always: show me everything, post nothing without my yes.

The rules that make this work

- **The brand-voice file does the heavy lifting.** One new story added to it = weeks of fresh, unfakeable content.
- **Approval is a feature, not friction.** Claude drafts and schedules; nothing goes live without your yes.
- **Platform rules live in the file** – hooks ≤8 words, IG max 5 hashtags, X ≤280, LinkedIn 150-300 words with white space. Claude reads them every time, so every post lands

native.

- **If a post could belong to a competitor, delete it.** The "would my followers believe I wrote this?" test beats every growth hack.

Want it running by VOICE?

"Jarvis – run the content engine." The full version lives inside my JARVIS assistant: voice-controlled, approval cards on screen, overnight runs ("I prepared your week while you slept, sir"), web research, and every upgrade I ship. **Jarvis is not for sale – members get him.**
